Subject: USG-Walworth
[USG Rationale.docx](#)

As with Isolatek in Indiana, I have prepared sort of a TSD for the addition of USG-Walworth to the list of sources to be evaluated (modeled or monitored) under the SO₂ data requirements rule. This "TSD" is attached. Dan, I will call you tomorrow, especially for making sure I have properly characterized the screening you did to identify these two facilities as facilities of concern. Susan, I think I'm just using the information you provided, but it would be helpful for you to check to make sure I got it right, particularly in the section called review of applicable emission limits. I hope to send these to the respective states later this week, to provide them an opportunity to dispute the addition of these sources to the DRR source list before we actually do it (which we are aiming to do in mid-March). Thanks for your help on this.
